Multiplying Fractions Problems

Underline and Circle where necessary!!

1. Multiply fractions and express in simplest form.

$$\frac{3}{5} \cdot \frac{4}{5} =$$

2. Multiply fractions and express in simplest form.

$$\frac{6}{2} \cdot \frac{10}{5} =$$

3. Multiply fractions and express in simplest form.

$$\frac{2}{10} \cdot \frac{5}{7} =$$

4. Multiply fractions and express in simplest form.

$$\frac{7}{8} \cdot \frac{9}{9} =$$

5. Multiply fractions and express in simplest form.

$$\frac{8}{6} \cdot \frac{4}{2} =$$

6. Multiply fractions and express in simplest form.

$$\frac{3}{6} \cdot \frac{8}{2} =$$

7. Multiply fractions and express in simplest form.

$$\frac{2}{4} \cdot \frac{4}{7} =$$

8. Multiply fractions and express in simplest form.

$$\frac{5}{7} \cdot \frac{10}{2} =$$

9. Multiply fractions and express in simplest form.

10. Multiply fractions and express in simplest form.

$$\frac{1}{10} \cdot \frac{6}{4} =$$

10. Multiply fractions and express in simplest form.

$$\frac{10}{5} \cdot \frac{3}{7} =$$
